CAPVACSR. BETTER CLEANING, WITH TRANSPORT.

The utmost safety of our equipment:
our commitment to respect the environment

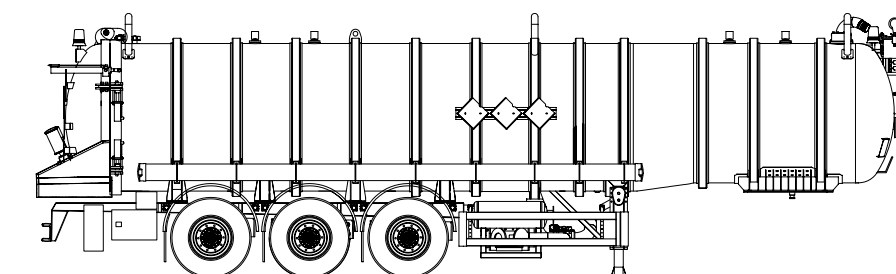

A large quantity of wastes is transported every day on all streets of the world; some of them are dangerous, since they can seriously injure people and the environment. CAPPELLOTTO has always been producing high technology equipments for the environment, in order to offer a solution to load and to carry dangerous wastes; in fact Cappellotto manufactures special tanks, complying with ADR norms and with the specific laws of each country. Dangerous wastes include various materials, solutions and objects, in different physical states (liquid, sludgy, solid) and with variable chemical properties. All tanks for dangerous wastes are designed to collect and transport goods belonging to following ADR classes:

- Class 3 Inflammable liquids
- Class 4.1 Inflammable solids
- Class 5.1 Comburant materials
- Class 6.1 Poisonous materials
- Class 6.2 Biohazard materials
- Class 8 Corrosive materials
- Class 9 Other dangerous materials.

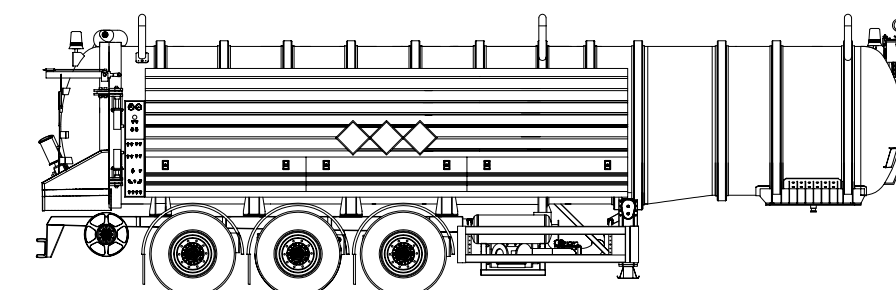

For a clean environment.

A wide and complete range of products to meet every need.
